We service and supply a large range of motors like...

And many more.

As an authorised sales dealer and service agent for a large range of motor manufacturers, we can offer a motor for any application, size, and environment, as well as vibrator motors, gear motors, and an extensive range of fans and pumps. We also have accessories like soft starters, variable speed drives, and access to a full range of power transmission accessories, including bearings, pulleys and belts, sprockets and chain.

Rewinding can be performed on motors up to 600kW and voltages up to 1000V. Since it is not always economical to rewind or repair small motors, we therefore carry a comprehensive range of motors in stock.

"If you have an electric motor... We have the solution."
